SUMMARY

Software Engineer with hands-on experience in backend development using .NET technologies. Proficient in ASP.NET Core, Web API, Entity Framework, and SQL Server. Experienced in building RESTful APIs, integrating third-party services, and working with e-commerce systems. Strong understanding of layered architecture, OOP, database design, and SDLC. Familiar with CI/CD practices using GitHub Actions and Azure. Focused on developing scalable and maintainable backend systems.

WORK EXPERIENCE

.Net Backend Developer - Part Time - Ottoo A.Ş **Nov 2023 - Nov 2024**

- Contributed to a project that integrates e-commerce platforms with leading marketplaces; developed integration processes using Minimal API.
- Participated in ASP.NET Core-based MVC and Web API projects, working on various modules such as product, shopping cart, and blog management.
- Implemented the integration of the BizimHesap invoicing service into the e-commerce platform and managed data exchange between services.
- Refactored the BizimHesap integration into a modular structure and developed it as a NopCommerce widget plugin to enable easy integration across multiple e-commerce projects.

Software Developer Intern, Ottoo A.Ş **July 2023 - Nov 2023**

- Received training in Git/GitHub, MySQL, C#, and NopCommerce.
- I developed a chatGpt-enabled chatbot widget plugin where users can ask questions about products they are about to buy.

EDUCATION

Software Engineering (100% Scholarship) **Nov 2021 - June 2025**

İstanbul Sabahattin Zaim University

Computer Programming **Oct 2018 - June 2020**

Sinop University Vocational School

PROJECTS

ERP Application with .NET 8 and Angular 17 **December 2025**

- I completed this training to gain a solid understanding of ERP systems, including their core business processes and software architecture. I built hands-on experience by developing backend services with .NET 8 using CQRS and MediatR, and integrating ERP modules through a dashboard-based interface developed in Angular 17.

CI/CD Pipeline & Azure Deployment Project **June 2025**

- Developed a number guessing game project and implemented a CI/CD pipeline using GitHub Actions, deploying the application to Azure. **Technologies:** C#, .NET, Entity Framework, FluentValidation, GitHub Actions, Azure DevOps
<https://github.com/gokhanguneyy/numberGuess>

Fall Detection (TÜBİTAK) **February 2025**

- In our TÜBİTAK-supported fall detection project, I developed ESP32-CAM and accelerometer integrations using C++. When a sudden movement or fall is detected via accelerometer data, the system triggers image capture and sends the image to YOLO and CNN-based AI models for analysis.

SKILLS

- C#
- ASP.NET CORE
- MVC & WEB API
- ENTITY FRAMEWORK
- N-TIER ARCHITECTURE
- MSSQL
- GIT/GITHUB
- RESTful API
- AGILE SCRUM
- LINQ

LANGUAGES

- Turkish (Native)
- English (B2)
